After this exchange, a cyclopentendiol moiety is attached to the 7-aminomethyl group of 7-deazaguanine, result in the hypermodified nucleoside queuosine (Q) (7-(((4,5-cis-dihydroxy-2-cyclopenten-1-yl)amino)methyl)-7-deazaguanosine)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 196 -INQGGVYEDIRIEHAKTIREMDLDGYAIGGLA-----VGETHEEMYRVIDAVVPHL

"The A20 cDNA induced by tumor necrosis factor alpha encodes a n type of zinc finger protein.";
J. Biol. Chem. 265:14705-14708(1990).
-1- FUNCTION: Interacts with NAF1 and inhibits TNF-induced NF-ka dependent gene expression by interfering with an RIP- or TRA mediated transactivation signal. Inhibitor of programmed cel death. Has a role in the function of the lymphoid system and contribute to the in vivo effects of TNF (By similarity).
-1- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                                                                                                  type of 2 J. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               variants (1). (1) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.6 protein from the present invention.
                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polynucleotides and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutal responsible for genetic disorders or other traits and to assume the contract of the

                                        The present invention describes haematopoietic receptor NR10 splicing variants (1). (1) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymocleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                       proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral infections. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple pancreatitis, and inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                      The present sequence represents a human haemopoietin receptor protein (NR10), specifically designated NR10:1. NR10 occurs as a transmembrane protein and a soluble protein. NR10 is a haemopoietin receptor molecule which participates in immunoregulation and haematopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NR10 can be used for the identification of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies and haematopoietic disorders including autoimmune diseases and allergies

Human and murine hematopoietin receptor polypeptides HPR1 and HPR2, useful for treating cell proliferation, metabolic, and reproductive hormone related conditions

Disclosure; Page 110-112; 136pp; English.

The present invention relates to human and murine haematopoietin receptor collections of the invention are useful for collections cell proliferation conditions e.g., pancytopaenia, lukopaenia, canaemia, thrombocytopaenia, neurodegenerative disorders and osteoporosis resulting from a lack of bone-forming cells. They are also useful for treating cell proliferation conditions such as leukaemia and tumour cells. HPR sequences are also useful for treating medical conditions and diseases such as cell proliferation, metabolic and reproductive hormone cells. HPR sequences are useful for treating medical conditions and concologic disorders e.g., Epstein-Barr virus-positive nasopharyngeal cervical and ovarian cancers, lung cancer (SCLC and NSCLC), including cancerical and ovarian cancers, lung cancer (SCLC and NSCLC), including cancervical and ovarian cancers, lung cancer (SCLC and NSCLC), including cancervical and ovarian cancers, lung cancer (SCLC and NSCLC), including cancervical and ovarian cancers, lung cancer (SCLC and NSCLC), including cancervical and ovarian cancers, lung cancer (SCLC and NSCLC), including cancernical and cancerial and cancers, anaemia, prostate, renal cell, cell, carcinoma, carcinoma, haematologic disorders, anaemias (e.g., anaemia cell carcinoma), haematologic disorders, anaemias (e.g., anaemia cell carcinoma), haematologic disorders, anaemia, myelo-cupations, cancerial cell vasces blastic anaemia, prototiva aplastic anaemia, prototiva anaemia cell carcinoma (e.g., acatemia), colon, trombocyto-paenic purpura (ITP), sickle cell vascoclusive crisis, myelofibrosis/ cell carcinoma cell cell carcinoma cell cell cell vascoclusive crisis, myelofibrosis/ cell cell vascoclusive cri is human for treating various other disorders such as osteoporosis, deficient mammary development and infertility. The present

                                                                                                                                                                                                                                                                             The present sequence represents a human haemopoietin receptor protein (NRIO), specifically designated MRIO.3. NRIO occurs as a transmembrane protein and a soluble protein. NRIO is a haemopoietin receptor molecule which participates in immunoregulation and haematopoietic cell regulation in vivo, and is useful in searching for haematopoietic factors capable of binding to the receptor. NRIO can be used for the identification of substances for the treatment and prevention of immune and haematopoietic disorders including autoimmune diseases and allergies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunoregulation; haematopoietic cell reguimmune disorder; haematopoietic disorder; metal allergy; pollen allergy.

CC metastasis, osteoporosis resulting from an excess of bone-resorbing colls. HPR sequences are also useful from an excess of bone-resorbing and conditions and conditions. They are useful for treating medical conditions and concologic disorders e.g., Epstein-Barr virus-positive nasopharyngeal concologic disorders e.g., Epstein-Barr virus-positive nasopharyngeal concologic disorders e.g., Epstein-Barr virus-positive nasopharyngeal concologic and ovarian cancers, lung cancer (SCIC and NSCIC), including correct (SCIC and NSCIC), including carcernal, carcinoma, carcinoma, fatigue, solid tumours (e.g., osteosarcoma, carcinoma), carcinoma, fatigue, solid tumours (e.g., anaemia) myeloc squamous cell carcinoma), haeematologic disorders, anaemias (e.g., anaemia) myeloc chaptastic syndromes (including refractory anaemia, refractory anaemia concernative purpura (ITP), sickle cell vasocclusive crisis, myeloc paenic purpura (ITP), sickle cell vasocclusive crisis, myelocid metaplasia, osteoclast disorders that lead to bone loss such as osteoporosis including post-menopausal osteoporosis, periodontitis cresulting in tooth loosening or loss, prosthesis loosening after joint creplacement, neurodegenerative conditions (e.g., acute polyneuropathy, compassible dementia including creutzfeld-Jacob disease, demyelinating neuropathy, chronic neuronal degeneration, stroke including creatively conditions, stroke including creatively conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neurodegenerative disorder; leukaemia; carcinoma; haematologic disorder; cancer; myelodysplastic syndrome; idiopathic thrombocytopaemic purpura; ITP; sickle cell vasocclusive crisis; myelofibrosis; myeloid metaplasia; osteoclast disorder; periodontitis; acute polyneuropathy; Bell's palsy; anorexia nervosa; chronic fatigue syndrome; Creutzfeld-Jacob disease; demyelinating neuropathy; Guillain-Barre syndrome; Gulf war syndrome; vertebral disc disease; myasthenia gravis; chronic neuronal degeneration; stroke; fatigue; tumour; sarcoma; osteoporosis; obesity; infertility;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            06-OCT-2000; 2000US-238706P

                  proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral infections. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, panctratitts, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5g11 chromosomal region. ABA93767 to

                                                                                                                                                                                                                                                                                                                                                                       The present invention describes haematopoietic receptor NR10 splicing variants (I). (I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.3 protein from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NR10; splicing variant; haematopoietin receptor; immunomodulator; haemostatic; haematopoietic factor; immunological disease; haematopoietic cell regulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NR10 splicing variants of hematopoietin receptor proteins and encodegenes, applicable in searching hematopoietic factors and developing remedies for immunological and hematopoietic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          exemplification of the

                                                                                                                                   The present invention describes a cytokine receptor designated zcytor17. CC Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, cc antirheumatic, antiarthritic and muscular activities. The zcytor17 CC proteins are useful for treating and diagnosing lymphoid, immune, cc inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated cc immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain cviral infections. They are also useful for inducting cytotoxicity and creating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autolmmune diseases (e.g. Crohn's disease), cancer, celerosis), inflammatory diseases (e.g. Crohn's disease), cancer, concreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the creating content of the present invention.
                                                                                  Query Match

CC cervical and ovarian cancers, lung cancer (SCLC and NSCLC), including CC cancer-associated cachexia, fatigue, solid tumours (e.g., osteosarcoma, CC sarcoma), carcinoma (e.g., ademocarcinoma (for example, breast cancer), CC squamous cell carcinoma), haematologic disorders, anaemias (e.g., anaemia of chronic disease, aplastic anaemia, Fanconi's aplastic anaemia), myelocomes (including refractory anaemia, refractory anaemia of chronic disease, aplastic anaemia, refractory anaemia of chronic disease, aplastic anaemia, refractory anaemia of chronic disease; myelocomes (including refractory anaemia, refractory anaemia of chronic purpura (ITP), sickle cell vasocclusive crisis, myelofibrosis/ myeloid metaplasia, osteoclast disorders that lead to bone loss such as osteoporosis including post-menopausal osteoporosis, periodontitis creplacement, neurodegenerative conditions (e.g., acute polyneuropathy, CC Bell's palsy, anorexia nervosa, chronic fatigue syndrome, transmissible dementia including Creutzfeld-Jacob disease, demyelinating neuropathy, CC dementia pravis, chronic neuronal degeneration, stroke including Cc myssthenia gravis, chronic neuronal degeneration, stroke including creating various other disorders such as osteoporosis, obesity, of the present mammary development and infertility. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    metastasis, osteoporosis resulting from an excess of bone-resorbing cells. HPR sequences are also useful for treating medical conditions and diseases such as cell proliferation, metabolic and reproductive hormone related conditions. They are useful for treating various haematologic and oncologic disorders e.g., Epstein-Barr virus-positive nasopharyngeal carcinoma, myelogenous leukaemia, colon, stomach, prostate, renal cell,

                                                                                                                                                                                                                                                                                                                                                                The present invention describes haematopoietic receptor NR10 splicing variants (I). (I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NR10 splicing variants of hematopoietin receptor proteins genes, applicable in searching hematopoietic factors and cremedies for immunological and hematopoietic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NR10; splicing variant; haematopoietin receptor; immunomodulator; haemostatic; haematopoietic factor; immunological disease; haematopoietic cell regulation.

(I) have immunomodulator and haemostatic activities. The proteins and encoded genes are applicable in searching for novel haematopoietic factors, and developing remedies for immunological and haematopoietic diseases. The haematopoietin receptor genes participate in in vivo immunomodulation and haematopoietic cell regulation, and in the search for haematopoietic factors capable of functionally binding to the receptors. The present sequence represents the human NR10.4

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a cytokine receptor designated zcytor17. CC Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, crowder and invention and muscular activities. The zcytor17 cc antirheumatic, antiarthritic and muscular activities. The zcytor17 cc inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral infections. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the 5q11 chromosomal region. ABA93767 to ABA93843 and ABB05730 to ABB05745 represent sequences used in the crowder and the present invention.
                                                                                                                                                                                                                                                              Query Match
